

Protect Your Garden from Deer & Rabbits

Deer and rabbits are notorious for damaging gardens, feeding on flowers, vegetables, shrubs, and young trees. Repellents work by targeting their sense of smell, taste, or fear response to create an environment that feels unsafe or unappealing.

Type	Best For	Advantages	Application Tips
Liquid	Protecting leaves, stems, and branches	Fast-acting and easy to apply directly to plants	Apply during dry weather; reapply after heavy rain
Granular	Protecting ground-level plants, bulbs, and perimeter defense	Long-lasting and resistant to rain	Sprinkle around the base of plants and in garden beds

Liquid Fence Deer & Rabbit Granular

- **Type:** Granular
- **How It Works:** Creates an unpleasant taste and smell to deter feeding.
- **Best For:**
 - Ground-level protection and perimeter defense.
 - Protecting bulbs and newly planted flowers.
- **Application:**
 - Apply around plant bases and garden borders.
 - Reapply every 3–4 weeks or after rain.

Liquid Fence Deer & Rabbit Spray

- **Type:** Liquid
- **How It Works:** Makes plants taste and smell unpleasant to deer and rabbits.
- **Best For:**
 - Direct protection of leaves and stems.
 - Preventing damage to flowers and shrubs.
- **Application:**
 - Spray directly onto dry leaves and stems.
 - Reapply every 7–10 days or after rain

Shake-Away Coyote Urine (Predator Scent)

- **Type:** Granular
- **How It Works:** Mimics the scent of a coyote, triggering a fear response in deer and rabbits.
- **Best For:**
 - Large spaces and wooded areas.
 - High deer pressure areas.
- **Application:**
 - Sprinkle around the perimeter and near vulnerable plants.
 - Reapply every 2–4 weeks or after heavy rain.

Everguard Deer & Rabbit Repellent

- **Type:** Liquid
- **How It Works:** Targets taste and smell with natural botanical oils.
- **Best For:**
 - Shrubs, flowers, and garden plants.
 - Long-lasting protection even after light rain.
- **Application:**
 - Spray directly on plants.
 - Reapply every 2–4 weeks depending on weather and pest pressure.

Shake-Away Fox Urine (Predator Scent)

- **Type:** Granular
- **How It Works:** Triggers fear response by simulating the presence of a predator.
- **Best For:**
 - Rabbits and small mammals.
 - Safe for use around pets and edible plants.
- **Application:**
 - Sprinkle around the garden perimeter and near problem areas.
 - Reapply every 2–4 weeks or after heavy rain.

Repels-All

- **Type:** Granular and Spray
- **How It Works:** Targets smell, taste, and touch to repel deer, rabbits, and other animals.
- **Best For:**
 - Spray: Use on leaves and stems for quick protection.
 - Granular: Create a perimeter barrier around plants.
- **Application:**
 - Spray: Every 7–10 days or after rain.
 - Granular: Every 4–6 weeks.

Best Practices for Repelling Deer and Rabbits

Alternate Products: Deer and rabbits can become accustomed to repellents over time. Rotating products increases long-term effectiveness.

Apply Early: Start using repellents before deer and rabbits begin feeding to discourage habits.

Reapply After Rain: Most repellents need to be reapplied after heavy rain unless labeled as rain-resistant.

Use Both Liquid and Granular: Create a strong defense by combining liquid sprays on plants with granular barriers around beds and perimeters.
